The Voice of Interventional Pain Management

FROM THE COURSE DIRECTORS

On behalf of the Board of Directors of the American Society of Interventional Pain Physicians (ASIPP®), we invite you to the ASIPP® Comprehensive Review Course in Ultrasound and Regenerative Medicine to be held in Memphis, TN, on June 9-10, 2016.

Regenerative medicine, where the body regenerates or rebuilds itself, is a relatively new and rapidly evolving front in the field of interventional pain management. Although stem cell therapy has garnered much of the attention over the past several decades, multiple other regenerative medicine modalities also have caught the public's attention. As experts in our field, we should be ascertaining if and when to offer these treatments to our patients.

Osteoarthritis and other degenerative conditions, which are largely a function of aging, are a major area of concern for pain physicians. Regenerative medicine is an exciting and rapidly evolving branch of medicine, which has the potential to let us turn back the clock and regenerate worn-out tissues. Based on current data, it is reasonable to integrate these regenerative techniques into treatment algorithms, usually after other traditional treatments have failed. As research progresses, if more conclusive evidence demonstrates superior efficacy over other modalities, the use of regenerative medicine techniques would be justified sooner in the treatment algorithm.

Since we began offering the Competency Review courses in 2005, it has become recognized as a **"must attend"** training event for interventional pain physicians and physicians just entering interventional pain management or in-training and physicians appearing for board examinations by various boards. The Practice Management course is so beneficial to practices, both office-based and ASCs, that many physicians send their staff early to keep them current on the cutting edge aspects of practice management.

These intensive review courses are designed to present interventional pain management specialists and other health care providers an in-depth review of multiple areas of interventional pain management—the areas we were never taught, yet are crucial for our survival. The course features many nationally recognized experts in pain management billing and coding and practice management as well as controlled substance management.

In addition to the review course, the American Board of Interventional Pain Physicians (for physicians) and the American Association of Allied Pain Management Professionals (for non-physicians) offers the opportunity for examination in order for physicians to obtain competency certification to and non-physicians to obtain associate certificates in Controlled Substance Management and Practice Management.

We hope you will join us at the home of the blues, Memphis, for this special educational event. Whether you have practiced pain medicine or interventional pain management for years, if you are new to the

DESCRIPTION

This ultrasound and regenerative medicine review includes 2 days of combined didactics and hands-on workshops. Participants will experience a comprehensive and intense learning opportunity, focusing on interventional pain management techniques.

TARGET AUDIENCE/PURPOSE

This comprehensive review course in interventional techniques is targeted to interventional pain physicians seeking CME credit hours and introduction or review of proven interventional techniques, as well as skills improvement and/or to fulfill CME hours.

EDUCATIONAL OBJECTIVES:

- Attain understanding of regenerative medicine
- Attain understanding of fluoroscopic interpretation
- Attain eligibility for ABIPP competency certification
- Incorporate regenerative medicine in treating your patients so that patients have better outcomes and reduced side effects
- Assist in providing high-quality, competent, safe, accessible, and cost-efficient services to your patients

OUTCOME

This 2 day, comprehensive review course in Fluoroscopy and Regenerative Medicine is designed to provide interventional pain physicians with the ability to understand ultrasound interpretation and regenerative medicine. This course is an essential component for interventional pain physicians and provides education opportunities to assist you in providing high-quality, competent, safe, accessible, and cost-efficient services to your patients.
